

Guidelines for first presentation

- Each group has to give a presentation of 15 minutes, you can divide explanation timing among your team as per your convenience.
- The slides should have the following outline:
 - Introduction
 - Objective
 - Dataset Used
 - Structure the the dataset
 - Preprocessing Steps
 - Methodology
 - Models Available
 - Model Chosen
 - Architecture of the model
 - How each module work in the model to solve the objective
 - Results
 - Conclusion
 - Future Direction
- Major weightage will be on the model:
 - You should have clear fundamentals of the model used (such as DNN, CNN, RNN, GAN, etc.).
 - Should have the understanding of its know how such in which case it will work fine and in which case it wont work and why
- The time limit is 15 minutes at max.
- To make the presentation more interactive all of you should ask questions related to different issues of the project, it might also be some suggestion but it should not be like “what is xyz?” , “how bla bla works?”. Asking valid questions will fetch you marks as it has 20% weightage.
- The second tierce is divided into 2 parts. 80% weightage is for presentations and 20% weightage is for asking questions. You will be given a turn to ask questions after the presentation. The quality of the question asked will be evaluated and the final marks will be given for its merit.
- All the groups whose presentations are scheduled on the same day should attend the entire session from beginning to end, failing which you will be disqualified. Every

audience should try to indulge in discussion after the presentation by asking questions (as the topics will be related).
